

GO-TO-MARKET · PRE-LAUNCH

Marketing & Social Media Plan

How to launch LamportPay: which channels to use, what to say, and which approach will build trust and a waitlist fastest.

Stage

Demo / Pre-launch

Primary goal

Waitlist + Trust

Horizon

First 90 days

Crypto in. Local money out. Send crypto on Solana, settle in USDC, and the recipient gets local currency.

THE BIG PICTURE

Marketing Strategy Tree

Every activity grows from one goal: build trust and a waitlist before the real launch.
Five branches carry the work.

Where every link points: the waitlist page. Every post, video, bio and partner mention should send people to one place, so it's clear which channel works.

STEP 1

Foundation

Set this up before spending any time on posting. It makes every later effort count.

One clear message

"You send crypto, your family gets local money in their bank. Every fee shown upfront, no hidden costs."

Who we're talking to

- Crypto holders sending money home (Pakistan, India, Philippines, Nigeria, LATAM)
- Freelancers paid in USDC
- Solana / Phantom users
- Later: businesses wanting an API

Trust signals

- Fee comparison vs Wise and banks
- Clear "demo" disclaimer
- Visible, real team

Waitlist page

- Collect email + country only
- One destination for all links
- Country data shows which market to open first

Legal caution: crypto and finance ads have strict rules. Never use claims like "guaranteed" or "instant profit," especially at the demo stage.

STEP 2

Social Media Channels

Platform	What to post	Priority
X (Twitter) Crypto & Solana hub	1–2 posts a day: demo clips, fee comparisons, build-in-public updates. Useful replies on big Solana accounts, no spam.	Highest 
LinkedIn Founder profile	The remittance problem and the founder's journey. Best for partners, investors and B2B.	High 
Reels / TikTok / Shorts	30-second videos like "Dubai → Pakistan: bank fee vs LamportPay." Local languages (Urdu, Hindi, Tagalog) perform better.	High 
YouTube Long-form	Searchable tutorials: "How to send crypto to a local bank account."	Medium 
Telegram + Discord	Own community for early users, feedback and announcements. Invite the first 100 personally.	Medium 

WHERE TO FOCUS

Which approach works best?

NOW

Build trust, free

X + Solana community (Superteam, hackathons) + founder's LinkedIn. The right audience is already there.

NEXT

Grow reach

Short videos (Reels / TikTok) showing the pain of remittance fees. Your best chance at going viral.

LATER

Paid ads

Google / Meta ads only after the real launch and licensing. Crypto ads are restricted and demo-stage spend is wasted.

STEPS 3–5

Community, Partnerships & Content

3 Community channels

- **Solana ecosystem:** Superteam chapters (incl. Pakistan), Colosseum hackathons, ecosystem listings
- **Reddit:** r/solana, r/CryptoCurrency, r/freelance, r/remittance. Useful posts, not ads
- **Product Hunt** on launch day
- **Crypto news & newsletters:** pitch "Solving remittances on Solana"
- **Freelancer groups** for Upwork / Fiverr sellers on Facebook and WhatsApp

4 Partnerships

- Co-marketing with Solana wallets and apps
- Tie-ups with freelance platforms and remote-job communities
- Crypto payroll companies
- Micro-influencers (10k–50k followers) on remittances or freelancing. Cheaper and more trusted

The most powerful method: one partner can reach thousands of the right users.

5 Reusable content ideas

- Fee charts: bank vs Wise vs LamportPay
- Simple "how the money moves" explainer
- Real stories from overseas workers & freelancers
- Weekly "building in public" update
- FAQs: is it safe, how long, which countries

STEP 6

90-Day Roadmap

Three months from zero to a public launch with an engaged waitlist.

STEP 7

What to Track

Summary

Build community and trust first with X, the Solana community and LinkedIn. Then grow reach with short videos. Only run paid ads after the real launch.
